Subject: More info on sample results

In answer to another question that has come up:

Of the approximately 352 homes with detected PCE, roughly 307 of them also have detected TCE and 45 do not.

Of the approximately 450 homes with detected TCE, roughly 307 of them also have detected PCE and 143 do not. (As noted, about 45 of those TCE-only homes were west of I-355.)

Therefore, subtracting out those homes west of I-355, approximately 450 (307+45+143-45) of 546 (611-65) homes sampled in the relevant area (82.4%) had "hits" for at least one of these constituents.
